                                                                                                            The present sequence, a human lymphotoxin beta receptor (LT-beta-R) blocking agent, comprises the extracellular ligand binding domain of the human LT-beta-R up to the transmembrane region. It can be used to treat a Thi cell mediated immune response which contributes to a delayed type hypersensitivity reaction, preferably contact, tuberculin type or granulomatous hypersensitivity, graft versus host disease, organ rejection or an autoimmune disorder, i.e. multiple sclerosis, insulin dependent diabetes, sympathetic conditions exacerbated by the activities of Th-1 type cytokines, or Listeria, Toxoplasma or Mycobacterium infection. Its ability to selectively or partially block the LT-beta-R pathway may be useful; in the treatment of abnormal lymphoid organ development associated with misexpression or overexpression of signalling by the LT-beta-R pathway. The present LT-beta-R blocking agent is capable of salector mechanisms. As Thi Cytokines can inhibit Th2 cell dependent responses, the present LT-beta-R blocking agent may also indirectly stimulate certain Th2 cell dependent responses which are normally inhibited by Th1 induced cytokines. Doses of about 1 mg/Kg of the present soluble LT-beta-R are expected to be suitable starting doses for optimising treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Lymphotoxin-beta; LT-beta; LT-beta receptor; follicular dendritic cell; immune system; tumour; follicular lymphoma; extracellular domain; human

administered for altering the survival or maintenance of follicular dendritic cells in a subject and for altering the architecture of the organs of the immune system. The method is useful for treating tumours, specifically follicular lymphomas. It offers an alternative therapy for those with tumours resistant to traditional chemotherapy. The present sequence represents the extracellular region of the human Libeta-receptor and comprises the ligand binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides a method for arresting or reducing, severity of effects of a tummour by administration of a composition which inhibits the interaction between lymphotoxin (LT)-beta and its receptor. An inhibitor of the interaction between LT-beta and its receptor can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 YNEHWNYLTICQLCRPCDPVMGLEEIAPCTSKRKTQCRCQPGMFCAAWALECTHCELLSD 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pre-ligand assembly domain (PLAD). This protein and others of the TNFR superfamily can be utilised to inhibit PLAD self-association, TNF receptor or Fas oligomerisation in a cell and ligand binding to members of the TNFR superfamily or Fas. The PLAD containing proteins are also useful for treating inflammation associated with autoimmune disease and in screening for inhibitors of PLAD association. The treatable disorders include periodic fever syndromes, sepsis syndromes, adult respiratory distress syndrome, ulcerative colitis, Crohn's disease, rheumatoid arthritis, autoimmune gastritis, psoriasis, Still's disease, Behcet's disease, Sjogren's syndrome, ankylosing spondylitis, autoimmune uveitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           necrosis factor receptor (TNFR) protein pre-ligand assembly domain (PLAD). polynucleotides are useful in the treatment of tumours, resistance to parasite, bacteria and viruses, restenosis and graft versus host disease. They are also useful for inducing proliferation of T-cells, endothelial cells and certain haematopoietic cells, to regulate antiviral responses and to prevent certain autolumnune diseases after stimulation of TRID by an agonist or TRAIL binding facilitator. The, antibodies which bind TRID polypeptides are useful for treating and/or preventing diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cardiovascular disorder; viral infection.

The compounds are especially designed from a binding loop of TNF-R p55. They are capable of inhibiting TNF binding to its cellular receptors and may be used to inhibit the biological activities of TNF. They may be used in treating TNF-associated conditions such as acute and chronic inflammatory

The method is useful for treating diseases characterised by bone loss such as osteoporosis, Paget's disease, metastatic bone disease, rheumatoid arthritis or periodontal disease, and modulating dendritic cell maturation, T cell proliferate and/or CD40 receptor systems. The present sequence represents and/or CD40 receptor systems. The present sequence represents actor receptor type of a tumour necrosis factor receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a memory obteoclastogenesis and bone resorption inhibiting peptide analogues from the present invention have osteopathic, cytostatic, antirheumatic, antiarthritic, antiinflammatory and are tumour necrosis factor (TMF)

This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift caused by, or associated with, an RNA molecule that has a frameshift caused by, or associated voidagnose age-related diseases, especially cancer and a wide range of neurodegementive disorders (e.g. Alzheimer's disease, Down's syndrome, myotonic dystrophy, Huntington's disease, Cd disease, Down's disease, II is an accorption to the method allows a definitive diagnosis of Alzheimer's disease in living patients, Cd allows a definitive diagnosis of Alzheimer's disease in living patients, Cd allows a definitive diagnosis of Alzheimer's disease may be caused by mutations in RNA rather than DNA. The invention describes the used of neuronal system RNA molecules, specifically proteins including Cd proteins Tau and Big Tau, ubiquitin B, apolipoprotein E, microtubule cosociated protein 2 (MAP2), neurofilament-L, neurofilament-M, cd neurofilament (GFAP), the cellular tumour antigen p53, B-cell leukemia/lymphoma 2 (bcl-2) proto-oncogene, semaphorin III, HUPF-1, high mobility group cyclein C (HMGP-C) and neuroendocrine specific protein A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ó
diabetes mellitus type II; microtubule associated protein; Tau; Big Tau;
               ubiquitin B; apolipoprotein E; MAP2; neurofilament-L; preseniln I; preseniln II; cellular tumour antigen; gqlial fibrillary acidic protein; GRAP; p53; semaphorin III; HUFF-I; bcl-2; B-cell leukemia/lymhoma 2 proto-oncogene; HMGP-C; NSP-A; high mobility group protein-C; neuroendocrine specific protein A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Diagnosing disease by detecting frameshift mutations in RNA or corresponding protein mutations - used to diagnose cancer and neurological diseases, particularly Alzheimer's disease, and also for treatment and prevention with specific ribozymes or wild-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0;

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by constitutions. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. The acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The colypeptides may be used as antigens in the production of antibodies contacting the amount of bound protein in the sample. The comparison and activity of P. acnes polypeptides and therefore treat P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as chagnostic agents for determining P. acnes presence, for example, by cerayme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed contacting the contact of the printed contacting the contact of the

                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful in reating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by p. acnes. The disorders include SAPHO syndrome (syndroits, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of brocein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                            SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyellits; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA, inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  XXXX
                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chain reaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques of or identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. (II) expression or biological activity. (II) and its produce other types of data and products dependent on DNA and capanostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences. Abg00010-ABG30377 represent novel human configuration, but was obtained in electronic format directly from WIPO expression of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and determining the amount of bound protein in the sample. The polypeptides may be used as antiqens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ΩI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           XXXXX
                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags conformed in gene therapy techniques conformed activity of (II) or to treat disease states involving entering antibodies against it, detecting or adantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating clasoraters involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasonatics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Abg00010-Abg30377 represent novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) of to treat disease states involving to restore normal activity of (II) of to treat disease states involving a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating isod supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. Abdolout-Bada30377 represent novel human call sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                  Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                            1 SQPQAVPPYASENQTCRDQE.....QSDTTCKNPLEPLPPEMSGT 197

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 6, Application US/08343380
Patent No. 5712112
GENERAL INFORMATION:
APPLICANT: Yu, Su-May
APPLICANT: Liu, Li-Fei
TITLE OF INVENTION: Gene Expression System Comprising the
TITLE OF INVENTION: Promoter Region of the Alpha-Amylase Genes
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun
STREET: 6300 Sears Tower, 233 South Wacker Drive

avermectin B 5-O-methyltransferase (EC 2.1.1..) - Streptomyces "avermitilis" C; Species: Streptomyces "avermitilis" C; Species: Streptomyces "avermitilis" C; Species: Streptomyces "avermitilis" C; Species: O5-Dec-1998 #sequence_revision O5-Dec-1998 #text_change 16-Jul-1999 C; Accession: JG6531 R; Ikada, H; Wang, L, R; Ohta, T; Inokoshi, J; Omura, S. Gene 206, 175-180, 1998 A; Title: Cloning of the gene encoding avermectin B 5-O-methyltransferase in avermectin A; Reference number: JG6531; MUID:98137789
                                                                                                                                                                                                                                                                                        A;Accession: JC6531
A;Molecule type: DNA
A;Residues: 1-283 <IKE>
A;Experimental source: wild type K139
C;Comment: This enzyme catalyzes the methylation of the hydroxyl group at the C5 pos1

C;Comment: This enzyme Actalyzes the hydrolysis of internal alpha-glucosidic linkages
is important in germinating seeds and presenting as multiple isoforms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C;Accession: G82241

Scoring table: OLIGO
Gapop 60.0, Gapext 60.0
Searched: 105224 seqs, 38719550 residues
Word size: 0
Total number of hits satisfying chosen parameters: 105224
Minimum DB seq length: 0
Maximum DB seq length: 2000000000
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C. FUNCTION: THIS IS ONE OF THE THREE CHAINS OF THE NONENZYMATIC
COMPONENT (FCF) SUBBUILT) OF THE ATPASE COMPLEY.
COMPONENT (FCF) SUBBUILT) OF THE ATPASE COMPLEY.
CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE
CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE
CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE
CHANTIES ALEHAR(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0)
HAS THREE MAIN SUBUNITS: A, B AND C.
CHAIN FAMILY: BELONGS TO THE ATPASE CHAIN FAMILY.
C. ISHMILARITY: BELONGS TO THE ATPASE CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright.                                                                                   The present sequence, a human lymphotoxin beta receptor (LT-beta-R) blocking agent, comprises the extracellular ligand binding domain blocking agent, comprises the extracellular ligand binding domain to fit the human LT-beta-R up to the transmembrane region. It can be used to treat a Thl cell mediated immune response which contributes to a delayed type hypersensitivity reaction, preferably contact, tuberculin type or granulomatous hypersensitivity graft versus host disease, organ rejection or an autoimmune disorder, i.e. multiple sclerosis, insulin dependent diabetes, sympathetic conditions exacerbated by the activities of Th-1 type cytokines, or listeria, Toxoplasma or Mycobacterium infection. Its ability to selectively or partially block the LT-beta-R pathway may be useful in the treatment of abnormal lymphoid organ development associated with misexpression or overexpression of signalling by the LT-beta-R pathway. The present LT-beta-R blocking agent is capable of selectively inhibiting Thl, but not Th2 cell dependent immune effector mechanisms. As Thl cytokines can inhibit Th2 cell dependent responses, the present LT-beta-R blocking agent may also indirectly stimulate certain Th2 cell dependent responses which are normally inhibited by Th1 induced cytokines. Doses of about 1 mg/Kg of the present soluble LT-beta-R are expected to be suitable starting doses for optimising treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ta; LT-beta; LT-beta receptor; follicular dendritic cell; tumour; follicular lymphoma; extracellular domain; human.

The invention provides a method for arresting or reducing, severity of effects of a tumour by administration of a composition which inhibits the interaction between lymphotoxin (LT)-beta and its receptor. An inhibitor of the interaction between LT-beta and its receptor can be administered for altering the survival or maintenance of follocular dendritic cells in a subject and for altering the architecture of the organs of the immune system. The method is useful for treating tumours, specifically follicular lymphomas. It offers an alternative therapy for those with tumours resistant to traditional chemotherapy. The present sequence represents the extracellular region of the human LTbeta-receptor and comprises the ligand binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; tumour necrosis factor receptor 5; TRID; TNFR-5; TR5; nootropic; TRAIL receptor without intracellular domain; diagnosis; cytostatic; tumour necrosis factor related apoptosis inducting ligand; vasotropic; immunosuppressive; neuroprotective; antiviral; antinflammatory; anticonvulsant; antiparasitic; cardiant; anti-HIV; antiparakinsonian; apoptotic cell death related disease; tumour; cancer; apoptotic cell death related disease; autoimmune disorder; cardiovascular disorder; viral infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes the human TRID protein (tumour necrosis factor (TNF) related apoptosis inducing ligand (TRAIL) receptor without intracellular domain, also referred to as tumour necrosis factor.

Creceptor 5 (TRNF-5 or TR5). TRID has cytostatic, immunosuppressive, noctropic, neuroprotective, antiviral, antiinflammatory, anticonvulsant, cardiant, anti-HIV, antiparkinsonian and vasotropic activities, and can be used in gene therapy. The TRID polynucleotides are useful in the treatment of tumours, resistance to polynuclocideotides are useful in the treatment of tumours, resistance to parasite, bacteria and viruses, restlenosis and graft versus host disease. They are also useful for inducing proliferation of T-cells, endothelial cells and certain haematopoietic cells, to regulate antiviral responses and cortain haematopoietic cells, to regulate antiviral responses and gonist or TRAIL binding facilitator. The antibodies which bind TRID colypeptides are useful for treating and/or preventing diseases associated with increased or decreased apoptotic cell death. The TRID colypetides, proteins, antibodies, agonists and antagonists are useful in the diagnosis, treatment or prevention of: (a) cancer; or useful in the diagnosis, treatment or prevention of: (a) cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (b) autoimmune disorders; (c) diseases associated with increased apoptosis; (d) cardiovascular disorders; and (e) viral infection. The present sequence represents a tumour necrosis factor receptor used in comparison with TRID in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 YNEHWNYLTICQLCRPCDPVMGLEEIAPCTSKRKTQCRCQPGMFCAAWALECTHC--ELL 118

The present invention describes peptides and peptide analogues which correspond in primary sequence to a binding loop of a tumour necrosis factor receptor (TNR-R) superfamily member. The compounds are especially designed from a binding loop of TNR-R p55. They are capable of inhibit the biological activities of TNR-R p689 may be used to inhibit the biological activities of TNR-They may be used in treating TNR-associated conditions such as acute and chronic inflammatory responses, septic shock, cachexia, autoimmunity, graft-versus-host disease, skin allergic reactions, immune complex disease,
                                                                                                                                                                                                                                                                                         transplantation rejection and malaria. Administration is, e.g. oral, transdermal, transmucosal, pulmonary, subcutaneous, intravenous or intramuscular. Parenteral dosage is 0.1-5 mg/kg/day. The present sequence represents an extracellular Cys-itch domain of TNF-R from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      52 VCATCAENSYNEHWNYLTICOLCRPCDPVMGLEEIAPCTSKRKTOCRCOPGMFCAAWALE 111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

Osteoclastogenesis and bone resorption. Osteoclastogenesis and bone resorption. Osteoclastogenesis and bone resorption inhibiting peptide analogues from the present invention have osteopathic, cytostatic, antirheumatic, antiarthritic, antinflammatory and immunomodulatory activities, and are tumour necrosis factor (TNF) related activation induced cytokine (TRANCE)/ receptor activator of NF-kappaB ligand (RANK) inhibitors. The method is useful for treating diseases characterised by bone loss such as osteoporosis, Paget's disease, and modulating dendritic cell maturation, T cell proliferation, and/or CD40 receptor systems. The present sequence represents an extracellular Cys-rich domain of a tumour necrosis factor receptor (TNR-R) superfamily member, which is used in the exemplification of the present invention.
osteoclastogenesis; bone loss; bone resorption; osteopathic; cytostatic; antirheumatic; antiarthritic; antiinflammatory; immunomodulatory; tumour necrosis factor-related activation-induced cytokine; TRANCE;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence of a recombinant human (rhu) tumour necrosis factor receptor {\tt TNFR/fc} fusion protein.

AAQ45224 is cDNA from clone 1 of library WI-26 VA4 of human fibroblast

cell line WI-26 VA4. The mature full-length TWFRI is a glycoprotein
having a mol. Wt. of about 75-80 kDa The cloning of the cDNA for
TWFRI was described in Smith et al., Science 248:1019,1990. Clone 1
is contained in expression vector pCAV/NOT-TNFR (ATCC 68088). A
recombinant chimeric antibody may be produced having TWFR sequences
substituted for the variable domains of either or both of the
immunoglobulin molecule heavy and light chains and having
contained for the variable domains. A specific example of a TWFR/FC
immunoglobulin molecule heavy and light chains and having
contained for the variable domains. A specific example of a TWFR/FC
inston protein is given in AAQ4525/K51003. The rhu TWFR:FC fusion
gene was created by ligating the following fragments into a cloning
vector: 1) an 867 bA ARPIBS-PVUZ fragment from pCAV/NOT-TWFR (ATCC
68088) contg. the cDNA encoding the truncated TWFR. 2) a 700 bp
styl-Spel fragment from plasmid pIXX498 coding for 232 AAs of the
copyrion of human IgG1: Plasmid pIXX498 is a yeast expression
vector contg. the FC fragment of human IgG1: 3) An oilgo linker; to
fuse the truncated TWFR with the human IgG1: PC fragment. This
cond of the truncated TWF receptor and the 5' end of human IgG1.

Cand primer AAQ45227, which is an antisense sequence encoding bps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A ligand to a member of the tumour necrosis factor (TNF)/nerve growth factor (NGF) receptor family which binds either to the region of the 4th-Cys rich domain of the receptor, or to the region between it and the cell membrane may be used in the production of a pharmaceutical composition for increasing the inhibitory effect of a soluble receptor of the TNF/NGF receptor family. This sequence is the sequence of the p75 TNF receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5 AVPPYASE-NQTCRDQEKEYYEPQHRICCSRCPPGTYVSAKCSRIRDTVCATCAENSYNE 63

The invention relates to a number of primate and/or rodent proteins, and the genes which encode them. The invention encompasses human dendritic cell prostaglandin transporter (DC-PGT); the TNF (tumour necrosis factor) receptor family-related proteins HDTEA84, HSLJD37R and RANKL; human CC chemokine HCC5; human deubiquitinating proteins Dubl1 and Dub 12; human Mo-1 and human and murine MD-2 proteins, which exhibit the properties of ligands for proteins comprising a leucine-rich motif (LRR); human cyclin E2; cDNAs encoding these proteins; and antibodies against these proteins. The proteins can be used for modulating the physiology or development of a cell. They can be used to mediate uptake of substrates (e.g., prostaglandin-like molecules), to modulate or mediate cellular interactions (e.g., induce or prevent trafficking, proteins which are important in various cellular processes such as the deubiquitination of proteins or cell cycle regulation. The products can be used for treating medical conditions such as immune, inflammatory or be used for treating medical conditions and as immune, inflammatory or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            function, AAY77462 and AAY77481 are rodent proteins of undefined function, and AAY77482 is an avian protein of undefined function. These sequences are given in the sequence listing but are not referred to in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               allergic disorders, or abnormal cellular proliferation, for example, cancers or degenerative conditions. They can be used to modulate immune responses in disease states e.g., autoimmune disorders, including
